### **Reflection on the last four years**

Critique of the vaccine saviour narrative

CLARE CRAIG APR 03. 2024

♡ 27 (D 12) (D 9

Share

I recently released this video on Twitter and was asked to put it on a platform for people not on Twitter and to provide a transcript. Here they both are!

I want to tell you a the story of the last few years. What happened to us all and what happened to me.

I cared greatly about my career, had ambitions for high status and worked for my pension and future security.

My life is totally different now. I have not been paid for my work since May 2020 but have never worked harder!

What I am going to tell you may surprise you. But it only is when compared to the official story. Everything I will say is backed up by solid evidence.

To start. Let me take you back to 2020.

There was an environment of unprecedented fear expertly manufactured by government behavioural scientists who said "The perceived level of personal threat needs to be increased among those who are complacent, using hard-hitting emotional messaging."

I have always been a worrier. I had a baseline anxiety which would flare up on occasion and become fairly debilitating. I was afraid in spring 2020. At first for myself but when we learnt more for my older friends and relatives and for the NHS.

But by summer-time, I knew something was not right. I am a specialist in diagnostic testing and it was the testing that concerned me. We were over diagnosing test errors as covid. Once the children were back at school in September, I dug into the data to see if I could prove that my concerns were justified. I did. I sought advice on what to do about what I had found and was told "get it out there."

I had never done social media but I reluctantly set up a blog and Twitter account and showed where the problem lay.

I naively expected one of two outcomes. Either, my concerns were wrong and people would explain how they had accounted for them or else they might say they hadn't noticed and would look into it. I was so naive! What actually happened was that I came under attack.

At the same time a whole series of wonderful people introduced themselves to me and offered their support. Many of them had been through the same experience and I ended up watching as other naive experts innocently voiced concerns on other aspects of covid policy and were then subjected to the same abuse.

Some of these experts were calling out the harm caused to children.

Abused children were locked at home with their abusers

Moreover, these Abusers were themselves under unprecedented stresses whether around money or not having their usual outlets to keep them level headed

Children were deprived of their social needs and important Milestones were not marked

Child mental health services Overwhelmed

Language development months behind because of masking

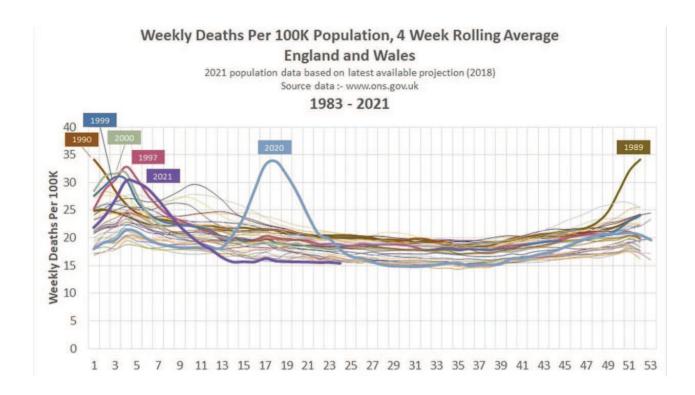

Others called out the harm to the lonely and most vulnerable

Locked away from loved ones

Remember, even after the harm had been done, measured, written about, there was still a second and third lockdown afterwards.

There were more deaths in 2020 per capita than in every year since 2008 but fewer than every year before then. The graph shows deaths per capita for various bad flu years

2020 and 2021 were of a similar magnitude, Although the timing of 2020 was off.

It's naïve to think this was all due to a virus.

There were many other things we did that would have increase mortality rates:

10-20% of hospital staff including emergency staff were told to isolate because cough or fever

Patients who needed life saving treatment told to stay home

Patients scared to attend in case they caught covid

Blanket Do Not Resuscitate orders - huge groups of people - old, learning disabilities

Hospitals refused to admit anyone with a DNR

Higher bar for ICU admission

Care home staff had to deal with absences and unable to provide hydration needed because of lack of PPE that they believed was life saving GPs no longer attending nursing homes

Antibiotics and attention no longer given to those in community with pneumonias

Fear - which hampers immune responses

Protocols for covid were distributed with a binary choice between ventilation and the use of drugs that reduce the respiratory drive

These all come with increased deaths.

Lockdowns and masks did not work – waves peak naturally without intervention - and they could not work.

The claim that spread was through large droplets that would fall to the ground was a lie based on a mistake.

Infected people emit aerosols that shrink with evaporation and hang in the air indefinitely and disperse widely.

Everyone was exposed to every variant and our immune systems prevented infection in the majority for each wave.

We were presenting facts and standing up for basic ethical principles -

First Do No Harm.

Precautionary principle - do not expose healthy to unnecessary risk (inc. unexpected or unknown)

Adults have a duty to protect children

Informed Consent

Bodily Autonomy

Yet we were attacked using all sorts of slurs.

In January 2021, a minister from the Justice Department carried out a public shaming.

It was really hard to respond to. For much of it he was pointing at things I had said, that were true and I gave sources to back everything up.

## Public Shaming from minister in Justice Department

But because they were things people didn't believe that was enough to be a smear.

How do you respond when people are laughing at you for calling the sky blue?

Rather than let them attack us as outliers a group of us came together to form a voluntary body of professionals – HART – including scientists doctors, statisticians, economists, ethicists, psychotherapists and other experts. We challenged and corrected each other and together wrote essay after essay showing how the claims being made about covid contradicted the body of knowledge amassed over decades of science.

We were not contrarians on principle but where policy was clearly doing more harm than good we called it out in an evidence based way.

We don't always agree with each other but over 2.5 years have created a comprehensive and cohesive body of work.

Soon after forming we witnessed a change in approach to covid vaccines from cautious optimism to pathological optimism.

The word vaccine is incredibly powerful - we are taught they are a modern medical miracle. It is a term that should never have been given to these products which are not like traditional vaccines in numerous ways.

I am no anti-vaxxer. I've had more than most as a doctor and my children more than most as we lived in the USA for a while

These were sold to us on the basis of more than could ever be realistically achieved – that they would create an impenetrable herd immunity that would rid the world of covid and allow a return to normal life.

And we found that the saviour NHS was replaced with a new saviour.

The saviour vaccine.

It was going to rid us of covid and create a new beginning leading us out of the darkness of lockdowns and restrictions.

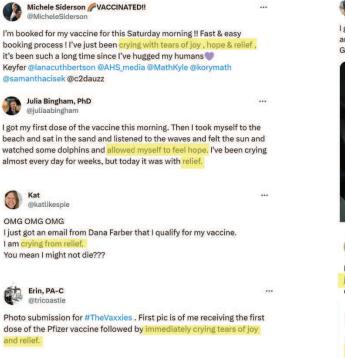

Its arrival was celebrated with joy and even songs of worship.

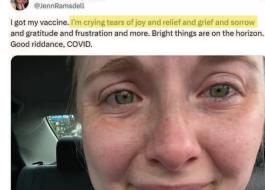

People adorned their bodies in celebration.

Churches and cathedrals were turned over to ensuring everyone could be saved.

Jenn Ramsdell, M.Ed.

...

Hubby and I were able to get vaccine appointments for tomorrow!! The joy and relief I feel is overwhelming in a good way. Looking forward to crying some happy tears tomorrow 🙂 🙂

Moderna vaccine side effects no one warned me about: crying out of happiness, relief, and appreciation of science

Many people described how they shed tears of joy and relief when being injected. Praising and thanking Science along the way.

Jesus would get a vaccine, Archbishop of Canterbury suggests as he says getting the jab is 'not about me and my rights to choose – it's about how I love my neighbour'

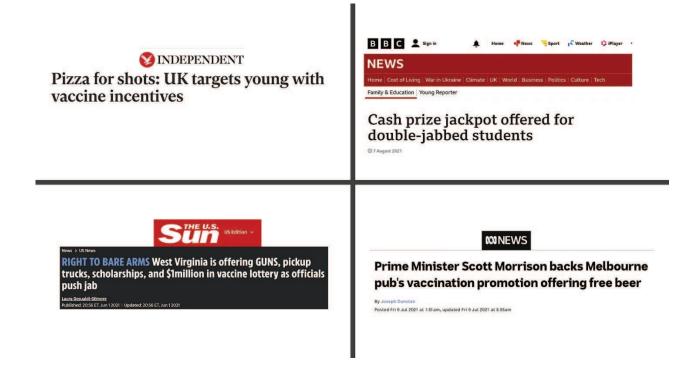

Church leaders endorsed it with the Archbishop of Canterbury saying Jesus would get one and the pope calling it an act of love.

In the UK people were bribed with pizza, free takeaway delivery and taxi rides.

It moved to lotteries for students.

Elsewhere there were prizes of apartments and motorbikes. The US offered guns. The Aussies beer.

When Switzerland and Austria started offering sex the escalation stopped. Had it become too obvious they'd been buying access to people's bodies.

Although many HART members were vaccinated very early on, we watched the evidence of their real-world effect closely and saw that they had been massively oversold.

But anyone questioning or criticising these novel treatments were shut down as blasphemers – shut down and punished.

# Blasphemers

The blasphemers were threatened, not only with loss of career but with prison sentences.

The non-believers were also threatened with prison, fines and even denial of healthcare.

The WHO started using the phrase "no one is safe unless everyone is safe" from August 2020.

With a fast-moving pandemic, no one is safe, unless everyone is safe

Learn more

This credo was used to make claims that the young should be injected to protect granny and to justify unethical vaccine passports and mandates.

Within a few months of the rollout there were numerous examples of outbreaks among heavily vaccinated populations e.g. In July 2021 - HMS QE (100% vaxed) an outbreak in an Israeli hospital 96% vaccinated then in a series of heavily vaccinated US universities from September.

They did not work to prevent infection. The chances that you've had it barely change whether you were vaccinated or not.

But were they safe?

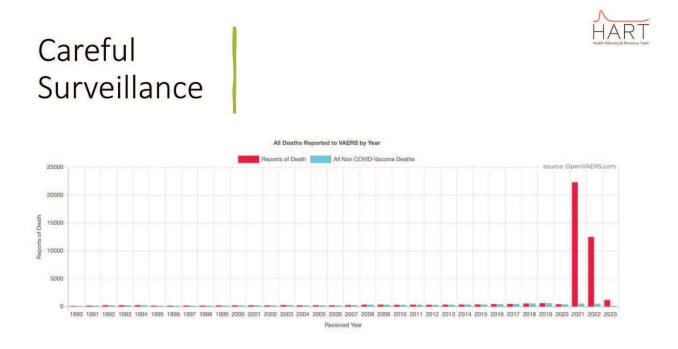

It is simply not possible to have a trial that could show safety from a statistical perspective.

In a hypothetical situation where a drug killed 1 in 4000 people – that would not show up as statistically significant in a trial of 44k people over 6 months. But it would be an

enormous risk. I am not suggesting this was the risk but it illustrates the problem with proving safety.

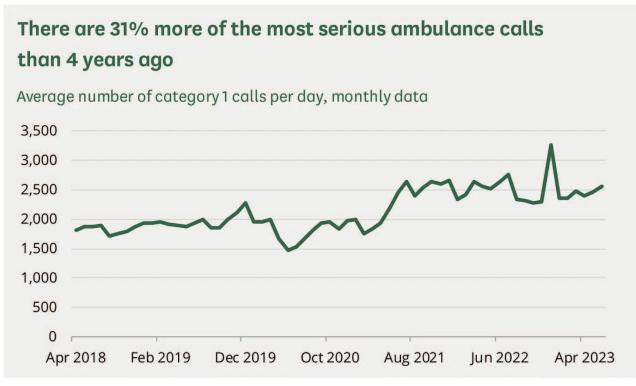

Surveillance systems were key to measuring any safety issues. This is where doctors report on concerns.

These alarm systems blared loudly.

The red bars here show reports of deaths in USA after vaccines. In blue are death reports for all other vaccines.

There was a big problem here and in every other measure that was totally ignored.

Source: NHS England, Ambulance Quality Indicators, AmbSYS time series

This shows the English data for life threatening ambulance calls.

It was steady at 2,000 calls per day (with a dip during lockdown) but then it rocketed during the vaccine rollout with an extra 500 per day and has not returned to baseline.

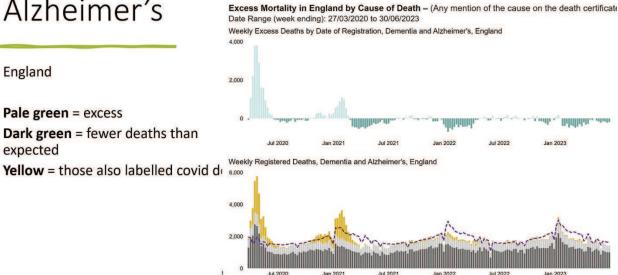

In the meantime, there have been excess non-covid deaths seen across the western world over the same time frame.

Who's been dying?

Let's start with who it is not.

### Dementia and Alzheimer's

The top graph here shows unexpected, extra deaths in bars above zero and where there were fewer than expected deaths the bars go below zero.

After two periods of high deaths we would expect to see missing deaths – because those people have already died.

After two years of few deaths in this group we can expect higher levels of deaths in coming winters.

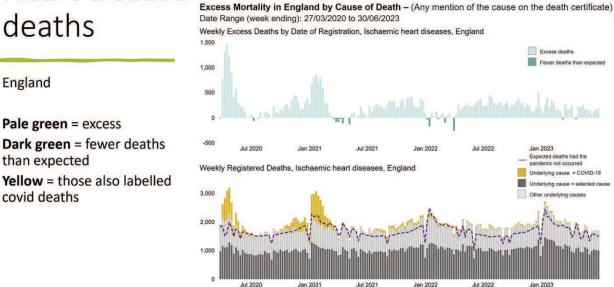

What we saw for dementia is what we would have expected to see for all causes.

Now look at ischaemic heart disease and the picture is very different.

### Ischaemic Heart disease deaths

England

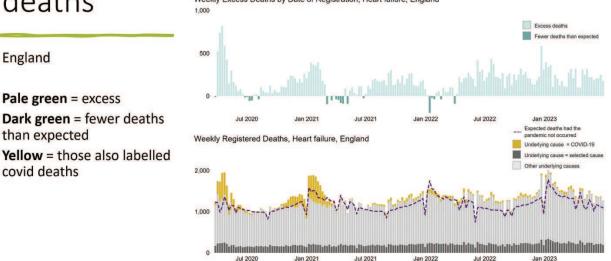

Yes there were deaths with the early covid waves and lockdowns but since vaccination these deaths have been incessant and they're not covid deaths which are marked in yellow on the bottom graph.

The same is true for heart failure deaths.

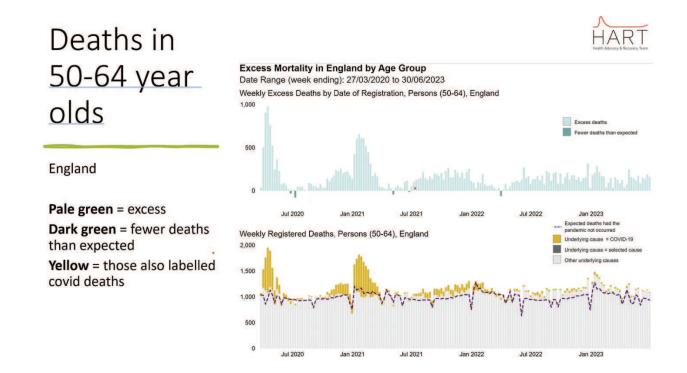

### Heart failure deaths

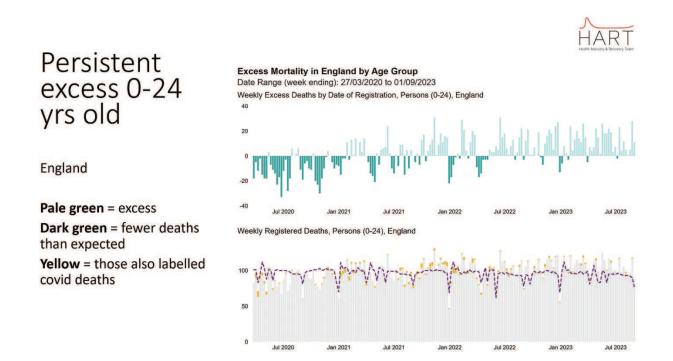

Deaths have been at a similar level to those seen in the first covid winter but have not been due to covid since the vaccine rollout.

The 50-64 year old age group has been worst affected.

Tragically it has also affected the youngest age groups. Children who were at no statistical risk from covid.

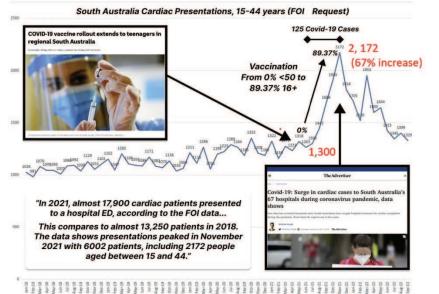

Could these extra deaths be due to long term effects of covid? That's an important question.

No! We know because of Australia.

### Could it be covid?

#### Control = South Australia

• 1,000 cases each by December 2021

• 67% increase in monthly cardiac presentations in 15-44 year olds after vaccines before covid hit

South Australia had only 1,000 cases across the whole state before December 2021 when Omicron arrived.

During the rollout in 15-44 yr olds the cardiac presentations to the emergency department in this age group rose from 1.300 to 2,172 a month.

It peaked in November 2021, before covid arrived.

Australia has had the same excess death problem as us starting at the same time.

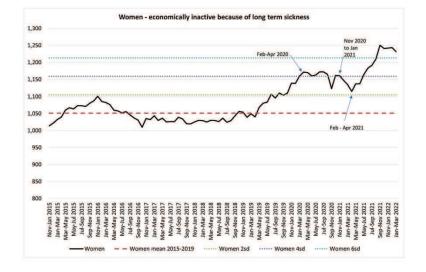

The deaths and emergencies are only the tip of an iceberg of harm.

How much harm?

Well one way to measure is to see how many people can't work because of long term sickness.

#### Rocketing long term sickness – women UK

Women UK

Plateau then fall when covid arrives

Rise from March 2021 onwards

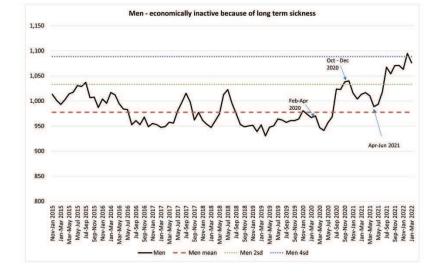

For women the numbers plateaued when covid arrived and were falling before vaccines arrived.

After the vaccine they rocketed to astronomically high levels – 1 in more than a billion chance of that happening by chance alone.

For men the pattern was similar.

### Rocketing long term sickness – men UK

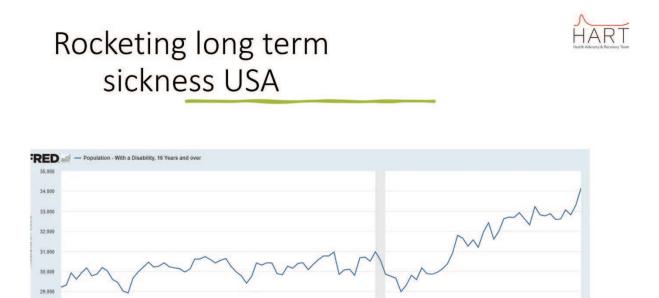

Men UK

Rise then fall when covid arrives

Rise from March 2021 onwards

There was no long covid impact prior to vaccinations but it takes off on rollout.

The same happened in America with a rise from early 2021.

Shaded areas indicate U.S. recessions

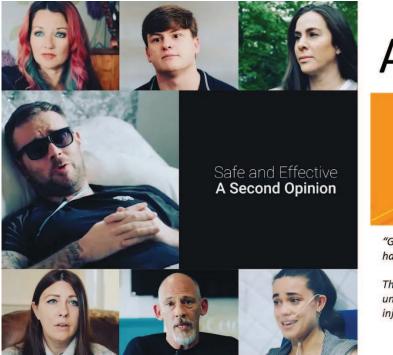

Jul 2016

They were apostates to this cult.

They were attacked as anti-vaxxers despite having taken the vaccines.

They have struggled to be believed by the healthcare system and even by their own friends and family and consequently set up support groups.

Do you remember the glee with which it was reported that facebook had shut down these groups having learned that these support groups were using a carrot emoji so they would not be taken down?

# **Apostates**

"Groups were able to share unproven vaccine harm posts in plain sight.

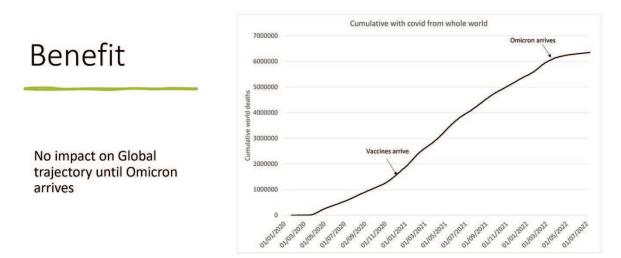

This allowed users to share unverified posts under the radar, claiming people had been injured or killed after their jab."

"Groups were able to share unproven vaccine harm posts in plain sight.

These people desperately needed that support and it was taken out from under them.

People have repeatedly dismissed these concerns as having been worth it for the Greater Good. Was it?

Here is the global trajectory of accumulating covid deaths.

You can see that it stays pretty constant before flattening off in 2022 with the arrival of omicron.

Omicron is half as deadly.

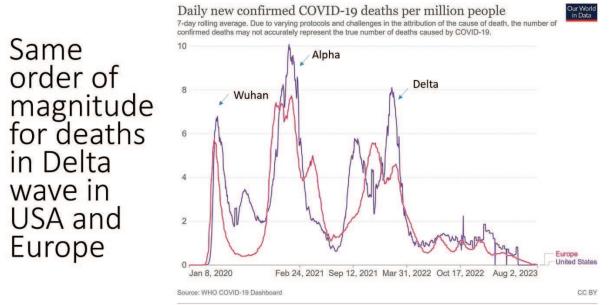

If the vaccines had worked to even halve deaths we should have seen that flattening off before.

But we did not.

The claims of 20 million lives being saved is just a fantasy based purely on modelled data.

The UK, Portugal and Ireland are all outliers for the Delta wave.

If we look at USA and Europe as a whole, the deaths for the Wuhan, Alpha and Delta waves are of the same order of magnitude and only fell away with Omicron.

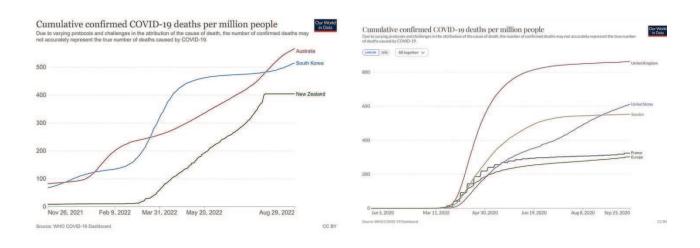

There were indeed fewer deaths per case for Delta but we don't know that that doesn't happen with repeated influenza waves for example.

All we know is that for influenza each death wave was similar to the last - just like this.

The nail in the coffin comes from looking at heavily vaccinated countries that had no covid until Omicron arrived.

#### First wave mortality

From early 2022 up to summer time New Zealand had 400 deaths per million.

Australia and South Korea it was the same when you subtract the 100 they began with.

Let's compare that figure to the deaths seen elsewhere in spring 2020 with the Wuhan variant.

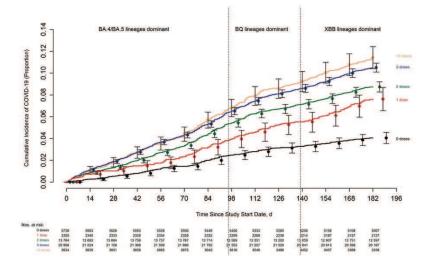

France and Europe as a whole had fewer than 400 deaths per million.

The UK had twice as many - but remember Omicron is half as deadly.

So where is the benefit?

As if that wasn't bad enough, there is good evidence from multiple sources that the vaccinated have been infected by Omicron at higher rates than the unvaccinated.

#### Immune health

Countries switching off data on case rates as they each showed vaccinated doing worse

Cleveland Clinic >50k health staff who had higher rates with each dose given, not due to testing bias or prior immunity.

The more doses the higher the risk.

There's plenty more I could tell you.

It gets worse - especially the power plays behind it all.

But I want to give you my testimony.

Among the various groupings I found myself in were plenty of Christians who had known something was wrong from the moment the church doors were forcibly shut.

Three things happened to me.

Firstly, Christians kept coming up to me asking if I was a Chrsitian and commenting that they thought I was protected.

That was an odd thing to say to someone who you've seen being attacked.

Then they said they'd pray for me.

The strange thing was that from around that time, I did start to feel protected. Instead of attacks creating anxiety I had an inner peace I hadn't experienced since being a child.

Secondly, I learnt to view the truth in a different way.

We had learnt the hard way

how people care far more about credentials than evidence.

How goalposts shift when something becomes indisputable

How it's easier to make someone curious and hope they take it further than just tell them the whole truth.

How the same conclusions can come from different areas of expertise and different voices.

At first, I identified the truth by its supporting evidence.

Falsehood / Wrong	Inconvenient Truth		
Magnified to discredit	Shut Down		
Ridicule through error	Ridicule speaker		
Engage to correct error and gain Kudos	Attack the messenger		
Easy to discern boundaries of claim	Frustratingly beyond grasp of one person		
Left alone	Waters muddied – in discarding the associated lie, you discard the truth		

But soon, I discerned distinctive patterns in how what are perceived as inconvenient truths are treated, compared to their counterparts: both intentional and unintentional perceived falsehoods.

I observed this for mistakes I made too.

When someone is thought to be wrong their mistake is magnified and shared widely to discredit them.

In contrast, when someone voices an inconvenient truth it gets shut down.

When someone is wrong, people laugh at the content of the error.

With an inconvenient truth, it's messenger who gets ridiculed.

When someone is wrong, there's an almost enthusiastic engagement to correct them. The one correcting the error gets kudos for their discernment.

But when an inconvenient truth is revealed, the messenger, not the message, becomes the target of attack.

When someone is wrong the boundaries of their claim are easy to discern.

But the truth? It's elusive. Together, we might inch closer to understanding it, but it remains frustratingly just beyond our full grasp.

When someone is already wrong, there's no need to further muddy the waters. Their idea stands erroneous on its own.

But when someone unveils an inconvenient truth, efforts are made to twist it or to weave falsehoods around it.

So, when people discard the lie, they're lulled into thinking they've also dismissed the embedded truth.

Thirdly, I started to find evil in all its forms.

I saw how terrible evils could be perpetrated by people who believed they were doing good but I also saw how few people spoke out to alert them to their mistakes.

I saw people Worshiping career, money and prestige meant that ethical principles were not defended.

When one person does that you might think that wouldn't matter too much - but this was happening at scale and the consequences of it were catastrophic.

The evils perpetrated by those in power during the covid era were even worse.

There is corruption at every level.

Pharmaceutical companies committed fraud.

Regulators cheered them on and even enabled the injection of children and the young who didn't even have a hypothetical hope of any benefit.

The medical and other professional regulators have persecuted those who spoke out.

Politicians have channelled money to their friends. This happened in every single country across the world.

Once my eyes had been opened to that, other evils revealed themselves.

The passing of euthanasia legislation in Canada led to 30,000 "medically assisted" deaths in 2021 – 1 in 30 deaths that year.

I also had my eyes opened to satanists and other types of Gnostics who were indeed, getting their earthly rewards.

I saw the dark long before I saw the light.

I reached the point where I realised humans are so flawed that our efforts to do what we think is right could be doomed to failure.

I started to realise how badly our society needed Christianity and to see how Christianity was the perfect antidote to so many of the problems of our current society.

What will motivate people to defend ethical principles when it will cost them to do so?

But I didn't think I needed God in my life.

I could see how easily I could have taken a wrong turning – how it could have easily been me responsible for harm...

My friends started to convert to Christianity. One reminded me what it had been like trying to tell the truth. How people refused to read or found excuses to dismiss us as liars

With that in mind she challenged me to read the gospel with an open mind.

Did it sound sounded like the truth or a lie?

Were the people persecuted and even killed, because it was true or were they just terribly taken in by a terrible big lie?

It sounded true.

There were even parallels in the censorship with John and Peter in Acts 4 "Everyone living in Jerusalem knows they have performed a notable sign, and we cannot deny it. But to stop this thing from spreading any further among the people, we must warn them to speak no longer to anyone in this name."

#### I started to pray.

I had spent two years, surrounded by the most brilliant, intelligent, kind, ethical people, trying to find a way to reach a political solution to the problems that had been created. We were all realising that there wasn't going to be one - at least not on a workable time scale.

Humans have made a mess of things and I don't think humans can put this right alone.

We have a saviour in Jesus, we need God's help and more and more people are coming to him – including me.

People have been horribly deceived.

The threat from the virus was exaggerated which allowed for the introduction of a saviour vaccine – one capable of ridding us of covid altogether while being totally safe.

Harms were ignored and concerns silenced.

Lives were destroyed along with trust in public health, our ethical foundations and the truth.

I firmly believe we only come closer to the truth by listening to all voices so thank you for listening to me today.

Outstanding! Thank you Dr Craig. I will listen to it again in case I missed anything, you covered everything that was the diabolical mess in Covid. My anger about what has happened to us has never gone away.

An accurate overview of the last 4 years - thanks so much, Dr Craig. All efforts internationally should now be concentrated on getting rid of this horrible vaccine technology that is mRNA - including its use in livestock. Canadian vaccinologist Dr Byram Bridle continues to raise concerns about food production, as in this 2 March 2024 letter of his to MP Andrew Bridgen in

your country (10 pages): <u>https://the-pffa.org/wp-content/uploads/2024-023-02-brief-report-Re-modRNA-vaccines-in-agriculture\_B.Bridle.pdf</u>
